

# Forcing Pre-Election and Exit Polls to Match Fraudulent Vote Counts: A Comprehensive Analysis

The integrity of the electoral process is essential for the proper functioning of any democracy. Pre-election and exit polls play a crucial role in providing voters with information about the candidates and issues, and in helping to ensure that the election results are accurate. However, there is growing evidence that these polls are being manipulated to match fraudulent vote counts, thereby undermining the trust of the public in the electoral process.

This article provides an in-depth analysis of the methods used to force pre-election and exit polls to match fraudulent vote counts. It examines the techniques employed by political operatives and election officials to manipulate poll results and ensure that the desired candidate is declared the winner, regardless of the actual vote count.

## Pre-Election Poll Manipulation

Pre-election polls are conducted before the election day to gauge public opinion about the candidates and issues. These polls can be used to influence voter behavior and to create the perception that a particular candidate is more likely to win.

There are a number of ways to manipulate pre-election polls. One common method is to use **push polling**. Push polls are designed not to measure public opinion, but to influence it. These polls often contain biased questions or misleading information, and they are often conducted by organizations that are affiliated with a particular candidate or political party.

Another method of manipulating pre-election polls is to **suppress the vote**. This can be done by making it difficult for certain groups of people to register to vote or to cast their ballots. For example, voter ID laws and cuts to early voting can make it more difficult for people of color, low-income voters, and young voters to vote.

## Exit Poll Manipulation

Exit polls are conducted on election day as voters leave the polling place. These polls are used to provide real-time updates on the results of the election. However, exit polls can also be manipulated to match fraudulent vote counts.

One common method of manipulating exit polls is to **stuff the ballot box**. This can be done by adding fraudulent ballots to the ballot box after the election has closed. Another method is to **alter the vote count**. This can be done by changing the number of votes cast for a particular candidate on

the voting machines or by manipulating the vote count after the ballots have been counted.

## **Consequences of Poll Manipulation**

The manipulation of pre-election and exit polls can have serious consequences for the electoral process. It can lead to the election of candidates who do not have the support of the majority of voters, and it can undermine the trust of the public in the electoral process.

In addition, poll manipulation can make it difficult for voters to make informed decisions about the candidates and issues. If voters are not able to trust the polls, they may be less likely to vote, or they may vote for a candidate who does not represent their views.

## **Preventing Poll Manipulation**

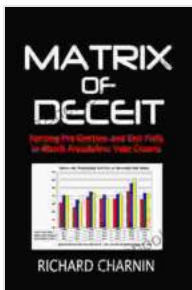

There are a number of steps that can be taken to prevent poll manipulation. One important step is to increase the transparency of the electoral process. This includes making poll data public and allowing independent observers to monitor the conduct of elections.

Another important step is to strengthen the laws against election fraud. This includes making it a felony to manipulate poll results and increasing the penalties for those who commit election fraud.

Finally, it is important to educate voters about the dangers of poll manipulation. Voters need to be aware of the techniques that are used to manipulate polls and they need to be skeptical of polls that seem too good to be true.

The manipulation of pre-election and exit polls is a serious threat to the integrity of the electoral process. It can lead to the election of candidates who do not have the support of the majority of voters, and it can undermine the trust of the public in the electoral process.

There are a number of steps that can be taken to prevent poll manipulation. These include increasing the transparency of the electoral process, strengthening the laws against election fraud, and educating voters about the dangers of poll manipulation.
